*Well-regulated streets (were) oriented almost invariably along with the cardinal directions, thus forming a grid-iron pattern. (At Kalibangan) even the widths of these streets were in a set ratio, i.e. if the narrowest lane was one unit in width, the other streets were twice, thrice and so on.Such a town-planning was unknown in contemporary West Asia. * - B.B. Lal

When one thinks of the world's first cities, Sumer, Memphis, and Babylon are some of the first to come to mind. If the focus then shifts to India, then Harappa and Mohenjo-Daro will undoubtedly come up, but after that, India's other ancient cities are often overlooked. This is unfortunate since India's oldest civilization, known as the Indus Valley Civilization or the Harappan Civilization, was contemporary with ancient Mesopotamia and ancient Egypt and had extensive contacts with the former, which makes it one of the most important early world civilizations. Spread out along the rivers of the Indus River Valley, hundreds of settlements began forming around 3300 BCE, eventually coalescing into a society that had all of the hallmarks of a true civilization, including writing, well-developed cities, a complex social structure and long-distance trade. Among the many cities that formed in this region was a site known today as Kalibangan, which was unknown to the modern world until archaeologists began uncovering its secrets in excavations during the 1960s. They uncovered a city that was not as large or important as the better-known sites of Mohenjo-Daro and Harappa, but one that was still relatively large and the most important of all Indus cities along the now extinct Saraswati River. Excavations at Kalibangan have revealed that the city had two phases of settlement which corresponded with the two major phases of Indus Valley Civilization, and that it influenced the smaller settlements along the Saraswati River. Archaeological work at Kalibangan has also shown that although it followed some of the patterns of larger Indus cities such as Mohenjo-Daro and Harappa, it was also a unique city in many ways. Kalibangan was located on a different river from the other major Indus Valley Civilization cities, and its river suffered a fate that led to the end of the city. The city of Kalibangan also presented modern archaeologists with a treasure trove of findings because it was one of the best preserved Harappan sites, giving scholars a chance to see not only how the people of Kalibangan lived, but possibly how the city died. Once Kalibangan became depopulated after 1500 BCE for reasons that are still uncertain, its memory, or at least the memory of the Saraswati region, lived on in the epic poems of the Aryans known as the Rig Veda. Although the Rig Veda is a religious-mythological text, it can help provide some clues as to the fate of Kalibangan, including whether the Aryans were connected to the city. Kalibangan: The History of the Indus Valley Civilization's Provincial Capital in Ancient India examines the region, the civilization that built it, and what life was like there thousands of years ago. Along with pictures and a bibliography, you will learn about Kalibangan like never before. Offers a variety of perspectives on the Indus Valley civilization, covering important objects recovered during recent excavations at Harappa, and recent archaeological discoveries on South Asian societies and ancient technologies. This book discusses climate and dating of the Indus Valley civilization and Sir Mortimer Wheeler summarizes other contributions to the study.*Includes pictures

When one thinks of the world's first cities, Sumer, Memphis, and Babylon are some of the first to come to mind, but if the focus then shifts to India, then Harappa and Mohenjo-daro will likely come up. These cities owe their existence to India's oldest civilization, known as the Indus Valley Civilization or the Harappan Civilization, which was contemporary with ancient Mesopotamia and ancient Egypt and had extensive contacts with the former, making it one of the most important early civilizations in the world. Spread out along the rivers of the Indus River Valley, hundreds of settlements began forming around 3300 BCE, eventually coalescing into a society that had all of the hallmarks of a true civilization, including writing, well-developed cities, a complex social structure, and long-distance trade. Mohenjo-daro was the largest city of the Indus Valley Civilization, one of the most advanced civilizations to have ever existed, and the best-known and most ancient prehistoric urban site on the Indian subcontinent. It was a metropolis of great cultural, economic, and political importance that dates from the beginning of the 3rd millennium BCE. Although it primarily flourished between approximately 2500 and 1500 BCE, the city had longer lasting influences on the urbanization of the Indian subcontinent for centuries after its abandonment. It is believed to have been one of two capital cities of the Indus Civilization, its twin being Harappa located further north in Punjab, Pakistan. The fact that the ancient Indus Valley Civilization is also often referred to as the Harappan Civilization demonstrates how important the discovery of Harappa is. As archaeologists and historians began to uncover more of the ancient Harappa site in the 19th and early 20th centuries, a more complete picture of the city emerged, namely its importance. Research has shown that Harappa was one of the three most important Indus Valley cities, if not the most important, with several mounds of settlements uncovered that indicate building activities took place there for over 1,000 years. At its height, Harappa was a booming city of up to 50,000 people who were divided into neighborhoods by walls.
Access Free The Indus Valley Civilization
and who went about their daily lives in well-built, orderly streets. Harappa also had drainage systems, markets, public baths, and other large structures that may have been used for public ceremonies. Ancient Harappa was truly a thriving and vibrant city that was on par with contemporary cities in Mesopotamia such as Ur and Memphis in Egypt. Among the many cities that formed in the region was a site known today as Kalibangan, which was unknown to the modern world until archaeologists began uncovering its secrets in excavations during the 1960s. They uncovered a city that was not as large or important as the better-known sites of Moheno-daro and Harappa, but one that was still relatively large and the most important of all Indus cities along the now extinct Saraswati River. Excavations at Kalibangan have revealed that the city had two phases of settlement which corresponded with the two major phases of Indus Valley Civilization, and that it influenced the smaller settlements along the Saraswati River. Archaeological work at Kalibangan has also shown that although it followed some of the patterns of larger Indus cities such as Moheno-daro and Harappa, it was also a unique city in many ways. Kalibangan was located on a different river from the other major Indus Valley Civilization cities, and its river suffered a fate that led to the end of the city. The city of Kalibangan also presented modern archaeologists with a treasure trove of findings because it was one of the best preserved Harappan sites, giving scholars a chance to see not only how the people of Kalibangan lived, but possibly how the city died. Did you know that as many as 7000 years ago, people who lived in the Indus valley practised rainfall harvesting? Not only that, this smart green civilization also used sun-baked bricks, which was an effective way to use solar energy. Familiarize yourself with the fascinating ways of this ancient civilization as Teri, our time-travelling explorer, goes back in time, to the Indus Valley. The Indus River was an important location in ancient times. Near it, civilizations thrived. In this book, you are going to learn about the ancient civilization of the Indus River, and how such a body of water was instrumental in the people’s survival. Go ahead and grab a copy of this book today. This book explores what life was really like for everyday people in the Indus Valley Civilization. Using primary sources and information from archeological discoveries, it uncovers some fascinating insights and explodes some myths. Supported by timelines, maps and references to important events and people, children will really feel they are on a time-travelling journey when reading this book.*Includes pictures *Includes a bibliography for further reading. When one thinks of the world’s first cities, Sumer, Memphis, and Babylon are some of the first to come to mind, but if the focus then shifts to India, then Harappa and Moheno-daro will likely come up. These cities owe their existence to India’s oldest civilization, known as the Indus Valley Civilization or the Harappan Civilization, which was contemporary with ancient Mesopotamia and ancient Egypt and had extensive contacts with the former, making it one of the most important or early civilizations in the world. Spread out along the rivers of the Indus River Valley, hundreds of settlements began forming around 3300 BCE, eventually coalescing into a society that had all of the hallmarks of a true civilization, including writing, well-developed cities, a complex social structure, and long-distance trade. Moheno-daro was the largest city of the Indus Valley Civilization, one of the most advanced civilizations to have ever existed, and the best-known and most ancient prehistoric urban site on the Indian subcontinent. It was a metropolis of great cultural, economic, and political importance that dates from the beginning of the 3rd millennium BCE. Although it primarily flourished between approximately 2500 and 1500 BCE, the city had longer lasting influences on the urbanization of the Indian subcontinent for centuries after its abandonment. It is believed to have been one of two capital cities of the Indus Civilization, its twin being Harappa located further north in Punjab, Pakistan. The fact that the ancient Indus Valley Civilization is also often referred to as the Harappan Civilization demonstrates how important the discovery of Harappa is. As archaeologists and historians began to uncover more of the ancient Harappa site in the 19th and early 20th centuries, a more complete picture of the city emerged, namely its importance. Research has shown that Harappa was one of the three most important Indus Valley cities, if not the most important, with several mounds of settlements uncovered that indicate building activities took place there for over 1,000 years. Ancient Harappa was truly a thriving and vibrant city that was on par with contemporary cities in Mesopotamia such as Ur and Memphis in Egypt. During the last centuries of the first millennium BCE, most of the Mediterranean basin and the Near East were either directly or indirectly under the influence of Hellenism. The Greeks spread their ideas to Egypt, Mesopotamia, and Persia and attempted to unify all of the peoples of those regions under one government. Although some of the Hellenistic kingdoms proved to be powerful in their own rights - especially Ptolemaic Egypt and the Seleucid Empire, which encompassed all of Mesopotamia, most of the Levant, and much of Persia during its height - no single kingdom ever proved to be dominant. The Hellenic kingdoms battled each other for supremacy and even attempted to claim new lands, especially to the east, past the Indus River in lands that the Greeks referred to generally as India. But as the Hellenistic Greeks turned their eyes to the riches of India, a dynasty came to power that put most of the Indian subcontinent under the rule of one king. The dynasty that came to power in the late 4th century BCE is known today as the Mauryan Dynasty, and although the ruling family was short-lived and their power was ephemeral, its influence resonated for several subsequent centuries and spread as far east as China and into the Hellenistic west. Through relentless warfare and violent machinations, the Mauryans were able to take a land that was full of disparate and often warring ethnic groups, religions, and castes and meld it into a reasonably cohesive empire. After establishing the empire, subsequent kings were able to focus their attentions on raising the living standards of their people, especially Ashoka. Why do we have to step back and learn about ancient civilizations? Because these are periods that have shaped modern belief systems and cities. Everything starts from something, and the ancient civilizations are the beginnings of societies. Read about the past to understand the present and predict the future. Get a copy of this book today. Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online. Pages: 25. Chapters: Indus River, Mortimer Wheeler, John Marshall, Ghangar-Hakra river, Indus script, Jonathan Mark Kenoyer, Ochre Coloured Pottery, Periodization of the Indus Valley Civilization, Harappan language, Harappan architecture, Jan G. Shaffer, Ghumani, Ahmvan, Sanitation of the Indus Valley Civilization, Muska. Excerpt: The Indus Valley Civilization (IVC) was a Bronze Age civilization (3300-1300 BCE; mature period 2600-1900 BCE) that was located in the northwestern region of the Indian Subcontinent. Flourishing around the Indus River basin, the civilization primarily centered along the Indus and the Punjab region, extending into the Ghangar-Hakra River valley and the Ganges-Yamuna Doab. Geographically, the civilization was spread over an area of some 1,260,000 km², making it the largest ancient civilization in the world. There is an Indus Valley site on the Oxus river at Shortugai and extending towards Alamgirpur on the Hindon river located only 28 km from Delhi, India. The Indus Valley is one of the world’s earliest urban civilizations, along with its contemporaries, Mesopotamia and Ancient Egypt. At its peak, the Indus Civilization may have had a population of well over five million. Inhabitants of the ancient Indus river valley, developed new techniques in metallurgy and handicraft (carneol products, seal carving), and produced copper, bronze, lead, and tin. The civilization is noted for its cities built of brick, roadside drainage system, and multistoried houses. The mature phase of this civilization is known as the Harappan Civilization, as the first of its cities to be unearthed was the one at Harappa, excavated in the 1920s in what was at the time the Punjab province of British India (now in Pakistan). Excavation of Harappan sites have been ongoing since 1920, with important
breakthroughs occurring as*Includes pictures *Includes online resources and a bibliography for further reading ..”.the ever present menace of inundation.” - Sir John Marshall, 1931 What is a city? A simple definition is a "largely constructed landscape," and through inferences and comparisons with modern states, a successful ancient city is generally said to have a number of defining characteristics: evidence of political hierarchies; a centralized authority that is simultaneously dependent on the accumulation of resources and the suppression of competitors; the maintenance of continuous negotiation, alliance building, and occasionally costly and risky investments such as warfare; specialized crafts; a hinterland supplying food; and monumental statements of central planning and communal effort, such as the Mesopotamian ziggurats. Mohenjo-daro was the largest city of the Indus Valley Civilization, one of the most advanced civilizations to have ever existed, and the best-known and most ancient prehistoric urban site on the Indian subcontinent. It was a metropolis of great cultural, economic, and political importance that dates from the beginning of the 3rd millennium BCE. Although it primarily flourished between approximately 2500 and 1500 BCE, the city had longer lasting influences on the urbanization of the Indian subcontinent for centuries after its abandonment. It is believed to have been one of two capital cities of the Indus Civilization, its twin being Harappa located further north in Punjab, Pakistan. Mohenjo-daro is an enigmatic settlement, which confuses simple definitions of what a city consists of. It has revealed little evidence of palaces, contains few definite religious buildings, and appears to have never been involved in any external or internal military conflict. The inhabitants' writing has not been deciphered, and little is known about their religious and post-mortuary beliefs. Nonetheless, the city's importance is epitomized by its monumental buildings and walls, enormous manmade platforms, innovative architectural techniques, and evidence that they engaged in trade over vast distances, with high-quality artifacts sent from the Indus Valley as far as Mesopotamia and even Africa. Of particular note was their ingenious drainage system—one of the earliest means by which sewage was drained out of the city. No other urban site of similar size had a hydraulic network as complex and effective as that of Mohenjo-daro, and it would only be surpassed thousands of years later by the network of aqueducts in Rome during the third century CE. For centuries this city was believed to have sprung into existence suddenly and without precedent, with a highly standardized system of urban development, art, and architecture that is emulated in contemporary settlements across the Indus River Valley in a phenomenon known as the "Pan-Indus system." Although this view has changed over the last few decades, there exists no definitive hypothesis as to how they grew such a complex urban society so quickly. Fittingly, the city has an equally intriguing and mysterious narrative that explains its decline and eventual disappearance, a tale that gives the site its name: the "Hill of the Dead." The Indus Valley Civilization was forgotten for millennia, until 20th century archaeologists rediscovered and began excavations at Mohenjo-daro and Harappa. Today only foundations remain, but the site's importance is represented by its UNESCO World Heritage status, awarded in 1980 for being a site of outstanding cultural importance to the common heritage of humanity. Mohenjo-daro: The History and Legacy of the Ancient Settlement of the Indus Valley Civilization looks at the history of the site and the archaeological work on it. Along with pictures depicting important people, places, and events, you will learn about Mohenjo-daro like never before. This work is a revealing study of the enigmatic Indus civilization and how a rich repertoire of archaeological tools is being used to probe its puzzles. * A chronological overview that establishes the important phases of the Indus civilization and places Indus society in the historical context of the development of South Asia * Illustrations showing speculative reconstructions of the Indus civilization's magnificent cities and photographs of artifacts from exquisite jewelry to beautiful carved seals *Wie selbstverständlich gehen wir davon aus, dass die neolithische Revolution, in deren Verlauf Nomaden zu Ackerbauern und Viehzüchtern wurden, ein bedeutender civilisatorischer Fortschritt war. James C. Scott entwickelt in seinem provokanten Buch eine ganz andere These: Die ersten Staaten entstanden aus der Kontrolle über die Reproduktion und errichteten ein harten Regime der Domestizierung und Unterwerfung, das Epidemien, Ungleichheiten und Kriege mit sich brachte. Einzig die »Barbaren« – die heimlichen Helden dieses Buches – haben sich der Sesshaftigkeit sowie den neuen Besteuерungssystemen verweigert und sich damit gegen die Mühlen der Civilisation gestemmt. The Indus Valley CivilizationIn the late 1800s, British engineers building some of the first railways in the Dominion of India discovered large numbers of bricks buried in the dusty plains of the Punjab. This was odd because historians were not aware of any cities or civilizations which might have constructed buildings in this area. It wasn’t until archeological expeditions in the 1920s that it was finally realized that these bricks were the remains of mighty cities built by a previously unknown ancient civilization. Inside you will read about Discovery Excavation of Harappa Origins Life and Death in the Indus Valley Downfall of the Indus Valley Civilization And much more! This culture has become known as the Indus Valley Civilization or sometimes the Harappan Civilization, after Harappa, the first city to be discovered. It has proved to be one of the largest ancient cultures, having a population of over five million people at its height and covering an area of one and a half million square kilometers. It also created very large cities, carefully planned and laid out where almost every house had its own bath and flush toilet, thousands of years before such things became common in other parts of the world. Somehow, the Harappans seem to have controlled this vast territory without having a large army or by conquering other weaker cultures, and they did not seem to have a single ruler such as a king or emperor. Then, for reasons that still aren’t understood, this culture declined and then vanished so completely that all that was left were piles of bricks in the plains of present-day India and Pakistan. We are still learning about these people, but this is what we know so far about the mysterious Indus Valley Civilization. The Indus Valley people built cities with indoor plumbing and sewage systems. Their civilization is one of the oldest on Earth, and also one of the most mysterious. The Indus Civilization is part of the Super Science Facts series that engages readers in grades 5 to 12 with fun science facts and colorful images on every page to support comprehension. The series covers Physical Science, Life Science and Social Sciences in individual sets. The minimal-text format (1,700 to 2,000 words per book) introduces content vocabulary defined in context and repeated in a glossary. This audio edition features professional narration and highlights text as it is read. The reader may turn narration on or off while reading. This audio edition features professional narration and highlights text as it is read. The reader may turn narration on or off while reading.*Includes pictures *Includes a bibliography for further reading When one thinks of the world’s first cities, Sumer, Memphis, and Babylon are some of the first to come to mind, but if the focus then shifts to India, then Harappa and Mohenjo-daro will likely come up. These cities owe their existence to India’s oldest civilization, known as the Indus Valley Civilization or the Harappan Civilization, which was contemporary with ancient Mesopotamia and ancient Egypt and had extensive contacts with the former, making it one of the most important early civilizations in the world. Spread out along the rivers of the Indus River Valley, hundreds of settlements began forming around 3300 BCE, eventually coalescing into a society that had all of the hallmarks of a true civilization, including writing, well-developed cities, a complex social structure, and long-distance trade. The fact that the ancient Indus Valley Civilization is also often referred to as the Harappan Civilization demonstrates how important the discovery of Harappa is. As archaeologists and historians began to uncover more of the ancient Harappa site in the 19th and early 20th centuries, a more complete picture of the city emerged, namely its
importance. Research has shown that Harappa was one of the three most important Indus Valley cities, if not the most important, with several mounds of settlements uncovered that indicate building activities took place there for over 1,000 years. At its height, Harappa was a booming city of up to 50,000 people who were divided into neighborhoods by walls and who went about their daily lives in well-built, orderly streets. Harappa also had drainage systems, markets, public baths, and other large structures that may have been used for public ceremonies. Ancient Harappa was truly a thriving and vibrant city that was on par with contemporary cities in Mesopotamia such as Ur and Memphis in Egypt. The research that has been done at Harappa over the last several decades has helped scholars understand various aspects of life there, and it has provided answers to many of the questions that had previously bewildered people about the Indus Valley Civilization. Work at Harappa has revealed that settlement was quite orderly, suggesting a strong leadership structure, but at the same time details about the ancient Harappan government itself are absent. Other discoveries show that Harappa was a very active city, where neighborhoods were subject to movement and outsiders visited regularly for trade. A series of well-built streets and walls separated the neighborhoods within Harappa and moved trade traffic in and out of the city in an orderly manner. Perhaps most interestingly, Harappa became depopulated in the early 2nd millennium BCE as all Indus Valley cities did, but there are no signs of violent struggle, which make its collapse a mystery that remains to be solved. Harappa: The History of the Ancient Indus Valley Civilization’s Most Famous City examines the region, the civilization that built it, and what life was like there thousands of years ago. Along with pictures and a bibliography, you will learn about Harappa like never before. Readers take an exciting journey to the Indus Valley as they explore the ancient civilization that arose in this fascinating place. Through detailed main text, fact boxes, and sidebars, this common social studies curriculum topic is presented in a way that highlights the traditional customs of this group of people and their contributions to the modern world. Accessible maps, a helpful timeline, and vibrant photographs help to expand the knowledge of young people fascinated by ancient cultures and to encourage an appreciation for diversity in the past and present. Use archaeological excavations to find out about the civilization of the Indus Valley. Scientists discover Y-DNA haplogroups O2a and mt-DNA haplogroup M4a in the Rakhigarhi ancient DNA. These haplogroups are associated with the speakers of Austro-Asian languages such as Mundari, Santali and Khasi. These haplogroups and related languages are also present in Southeast Asia. In India, speakers of these languages are currently found mostly in Central and East India. Even though a prominent philologist of Harvard University, Mr. Michael Witzel, has argued the case for a language close to Munda (which he calls para-Mundari) being one of the languages of the erstwhile Indus Valley, this work has met with resistance from most others. So if the genetics do find haplogroups O and M4a in Rakhigarhi, some of our current understanding of Indian history may have to be revised. Tony Joseph in The Hindu, December 23, 2017Discusses the history and civilization of the Indus Valley over the last 5,000 years and how the Indus River is used today. This series has been created to support the schemes of work in the History Curriculum at Key Stage 2. Each spread addresses a particular topic. Text is clear and divided into easily digestible paragraphs, whilst key words are highlighted. Suggestion boxes provide activities and tips for the reader. A brief introduction to the history, archaeology, art, language, and culture of the Indus Valley civilization, written by the leading North American Indus archaeologist.*Includes pictures *Includes a bibliography for further reading When one thinks of the world’s first cities, Sumer, Memphis, and Babylon are some of the first to come to mind, but if the focus then shifts to India, then Harappa and Mohenjo-daro will likely come up. Spread out along the rivers of the Indus River Valley, hundreds of settlements began forming around 3300 BCE, eventually coalescing into a society that had all of the hallmarks of a true civilization, including writing, well-developed cities, a complex social structure, and long-distance trade. Mohenjo-daro was the largest city of the Indus Valley Civilization, one of the most advanced civilizations to have ever existed, and the best-known and most ancient prehistoric urban site on the Indian subcontinent. It was a metropolis of great cultural, economic, and political importance that dates from the beginning of the 3rd millennium BCE. Although it primarily flourished between approximately 2500 and 1500 BCE, the city had longer lasting influences on the urbanization of the Indian subcontinent for centuries after its abandonment. It is believed to have been one of two capital cities of the Indus Civilization, its twin being Harappa located further north in Punjab, Pakistan. The fact that the ancient Indus Valley Civilization is also often referred to as the Harappan Civilization demonstrates how important the discovery of Harappa is. As archaeologists and historians began to uncover more of the ancient Harappa site in the 19th and early 20th centuries, a more complete picture of the city emerged, namely its importance. Research has shown that Harappa was one of the three most important Indus Valley cities, if not the most important, with several mounds of settlements uncovered that indicate building activities took place there for over 1,000 years. At its height, Harappa was a booming city of up to 50,000 people who were divided into neighborhoods by walls and who went about their daily lives in well-built, orderly streets. Harappa also had drainage systems, markets, public baths, and other large structures that may have been used for public ceremonies. Ancient Harappa was truly a thriving and vibrant city that was on par with contemporary cities in Mesopotamia such as Ur and Memphis in Egypt. Among the many cities that formed in the region was a site known today as Kalibangan, which was unknown to the modern world until archaeologists began uncovering its secrets in excavations during the 1960s. They uncovered a city that was not as large or important as the better-known sites of Mohenjo-daro and Harappa, but one that was still relatively large and the most important of all Indus cities along the now extinct Saraswati River. Excavations at Kalibangan have revealed that the city had two phases of settlement which corresponded with the two major phases of Indus Valley Civilization, and that it influenced the smaller settlements along the Saraswati River. Archaeological work at Kalibangan has also shown that although it followed some of the patterns of larger Indus cities such as Mohenjo-daro and Harappa, it was also a unique city in many ways. Kalibangan was located on a different river from the other major Indus Valley Civilization cities, and its river suffered a fate that led to the end of the city. The city of Kalibangan also presented modern archaeologists with a treasure trove of findings because it was one of the best preserved Harappan sites, giving scholars a chance to see not only how the people of Kalibangan lived, but possibly how the city died. This slim volume is an attempt to rouse the interest of students and non-specialists in the early civilization of the Indus valley and adjoining regions of Pakistan and India. The challenges of archaeological interpretation are discussed, together with maps, site plans and illustrations of artefacts, but the evidence is presented in social terms rather than in a technical way. In an attempt to cast an overall perspective, the Indus civilization is presented in the context of contemporary cultural development in South Asia as well as Western and Central Asia. The third edition of this volume included references to new ideas on the Indus civilization and to excavations at a small but significant site. This revised and updated fourth edition contains additional material on Dholavira and the harnessing of flash-floods. This book, filled with amazing facts and photographs, describes what life was like for people living in the ancient Indus Valley. It gives an in-depth account of all aspects of
the life and people of the time, providing examples of their incredible skills and organisation - including their cities, industry, trade, science, technology, engineering and all aspects of everyday life. The ‘All About’ series is an educational collection of books by P S Quick, and is targeted to interest 7 to 11 year olds - but will fascinate readers of all ages. At the end of each book there is a quiz section for the reader, featuring 150 questions and answers. The Indus Valley people built cities with indoor plumbing and sewage systems. Their civilization is one of the oldest on Earth, and also one of the most mysterious. The Indus Civilization is part of the Super Science Facts series that engages readers in grades 5 to 12 with fun science facts and colorful images on every page to support comprehension. The series covers Physical Science, Life Science and Social Sciences in individual sets. The minimal-text format (1,700 to 2,000 words per book) introduces content vocabulary defined in context and repeated in a glossary. This is the fourth volume of the Ancient Pakistan - An Archaeological History. It deals with a number of issues of the Indus Civilization, which are primarily of theoretical importance. The main topics that have been discussed are the social and political organization of the Harappan society, the Harappan religion, the Indus script and language, the beginning and the end of this vast civilization, and the recent attempts in creating some myths around the Indus Civilization. Since this volume is primarily dedicated to the theoretical and the abstract, descriptive material is kept to a minimum. According To This Book The Dravidians Were The Founders Of The Indus Valley Civilisation And This Book Chronicles Their Later History.
